The Cement Checklist: 3Ps That Cement Clinical Success - Predictability, Precision, Performance

A clinical guide for simpler, smarter, stronger cementation

Synopsis

Simpler theories are often described to be more “elegant” or “beautiful” – and in clinical dentistry, they also mean smarter. With so many materials, techniques, and decisions involved in cementation, it's easy to get lost in the details. Akit Patel is here to cut through the confusion using the Success Simplified approach – helping you to confidently decide when to bond, when not to, and how to choose the right cement every time.

As contemporary indirect ceramic materials become the hallmark of our daily practice, adhesive cementation is transforming how we restore and preserve teeth. Mastering cementation has never been more crucial. Akit will be taking a closer look at how to demystify the process, refine protocols, and rethink cement selection to champion predictability and precision – supported by science and real-world clinical experience.

A practical guide to the “when, why, and how” of cementation – featuring actionable tips and tricks, plus a fresh perspective on how temporisation, soft tissue management, and smart, innovative cements can leave a lasting “fingerprint” on restorative outcomes.

Learning Objectives

1. Recognise the different modes of cementation available in modern dentistry.
2. Apply a predictable checklist for your chosen cementation procedure.
3. Plan indirect procedure to achieve predictability, efficiency and better patient outcomes.
