Course Highlight

In a world that is focused on beauty, dentistry is increasingly becoming an integral component of aesthetics. As a dentist we are continually striving to perfect our art and in a demanding environment we need to make sure our tools and techniques deliver consistent and predictable results.

This course suits dentists, therapists and dental auxiliaries.

Course Outline

- Considerations of aesthetic options as well as exploring pros and cons of these.
- Material choices including clinical applications and tips
- Multi-strand treatment modalities including orthodontics and use of lasers
- Layering composite resin techniques
- Colour mapping and shade selection
- Light curing techniques and technologies

Course Objectives

On completion of this course, the participant will be able to:

- Understand and apply clinical reasoning to identify underlying factors in aesthetic deficiencies
- Understand considerations in achieving the ideal smile
- Identify tooth form and function and how to achieve aspects of primary, secondary and tertiary anatomy
- Understand colour and it's application to direct and indirect restorations
- Understand and apply polychromatic layering techniques for composite resin
- Understand and apply tints to achieve enhanced aesthetic results
- Perform mock ups and stents
- Apply enhanced finishing and polishing techniques
- Understand and apply light curing techniques for optimal results

Special Feature: Dentists attending the course are encouraged to bring their curing lights to test them on the day.
